Subject: West Lake Landfill - On-Site Activities

I just spoke with Dan Feezor. Bill Abernathy is working this week but mainly in the office to complete all of his logs. There are no health physicists on-site this week so there are no plans to collect or process any additional samples. Lisa (Arcadis-Cotter) will be back on-site next Monday along with Bill and at least one health physicist. The plan is to finish up any work related to additional characterization that week weather permitting.

This should include the collection the three sediment samples which we will need to collect splits from. We have a TO with Tetrattech for analytical services through Test America.

I will also need to collect one more Radon Emanation sample which I will probably identify next Monday.

I don't have an exact date yet but one of us will probably need to be on-site one day to finish things up next week.

Tom
